778 Atlantic Drive NW
Atlanta, GA 30332

I am a third year Ph.D. student co-advised by Dr. Meredith and Dr. Sven Behrens. I received my bachelor's degree from Hope College where my undergraduate research focused on separations via electrostatic adsorption. Also, I partook in undergraduate research on fuel cells at the University of South Carolina. My Ph.D. work focuses on an advanced froth floatation technique and using it to improve filtration processes such as whitewater clarification in the paper industry.

Brief Biography

B.S. General Engineering with Chemical Emphasis;
minor in Chemistry
Hope College

Interests: surface science, colloids, foams

Personal Interests

Sports, camping, reading
