311 Ferst Drive NW
Atlanta, GA, 30332

I was born in China and I obtained my degree of bachelor of Natural Sciences in Chemistry in Zhejiang University, Hangzhou. During those years, I did research on the application of cellulose-templated metallic oxide composite as electrode materials, and electrodeposition of silica on graphene for corrosion protection. I became a Ph.D. student advised by Dr. Meredith in fall, 2018. Currently, my research work focuses on studying cellulose-chitin composites for packaging and coating materials.

Brief Biography

B. S. Chemistry, Zhejiang University, Hangzhou, China

Research Interests: Polymers, Coatings, Nanoscience, Process Design

Personal Interests: Playing badminton, Making handicrafts
